

CONSTRUCTION AND DESIGN OF INSTRUMENTS FOR FLOW, LEVEL AND TEMPERATURE

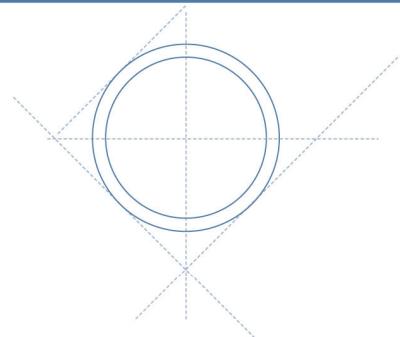

FLEMCO Flowmeter

Typical Applications

The FLEMCO flow meters measure the flow of most liquids and gases within the process industries, including chemical, petro-chemical, pharmaceutical and the power industry.

The FLEMCO is based on the principle of measuring velocity in the pipe line, therefore the flow measurement is volumetric.

The FLEMCO flow meters are backed by international standards covering flow calculation, manufacturing tolerances, accuracy and installation requirements. This type of bare bone technology is world wide accepted and supported by millions of successful installations.

Features

The FLEMCO flow meter features are:

Standardised product based on well proven technology.

Compact design.

Simple construction.

Free choice for horizontal or vertical pipe run.

Standardised construction means low inventory.

No moving parts.

Not sensitive to vibrations.

The electronics delivers output signal linear to flow.

Digital indicator for local flow reading.

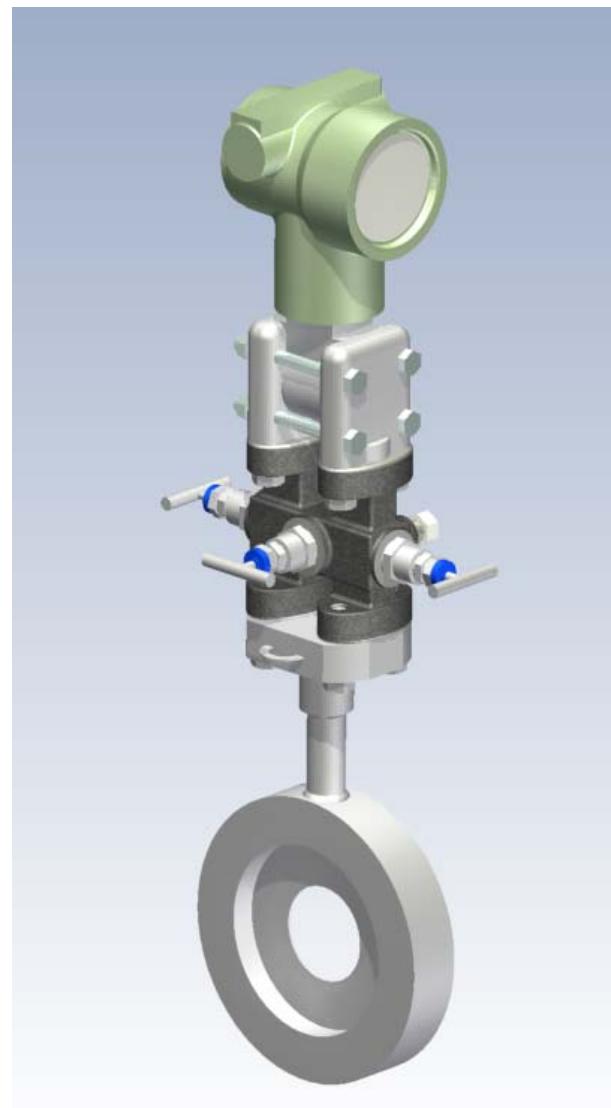

High accuracy.

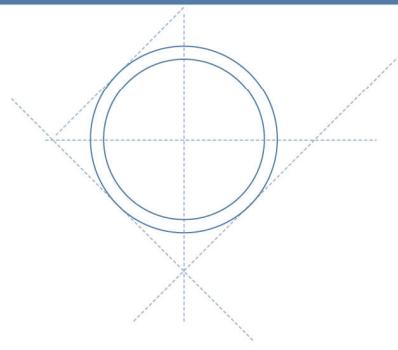

Wide rangeability.

Easy to install.

Easy to re-calibrate.

Model with integrated manifold valve.

Construction

Model F1

The FLEMCO flow meter model F1 consists of a primary element based on the differential pressure principle, a 3 valve manifold valve and an electronic differential pressure transmitter with digital signal processing.

Model F2

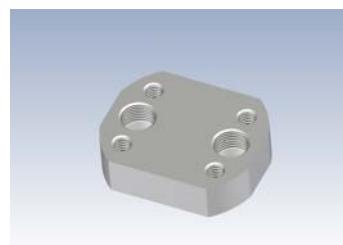

The FLEMCO flow meter model F2 consists of a primary element based on the differential pressure principle with an integrated 3 valve manifold valve and an electronic differential pressure transmitter with digital signal processing.

The FLEMCO flow meter is mounted between flanges in sizes from DN 40 (1½") to DN 400 (16") in pressure ratings up to PN 40 (300 lbs).

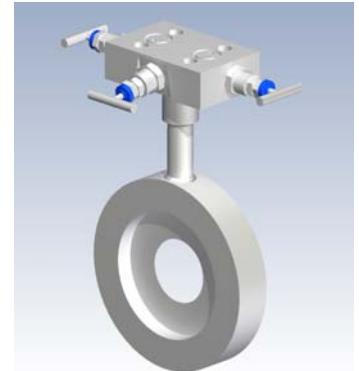

Accessories

Remote Mounting Kit type RMK is available if remote mounting of electronics is required in case of not easy accessible pipe line or elevated process temperature. The customer has to provide the stainless steel instrument tube Ø 12 x 1 mm between flow meter and electronics.

Model F1

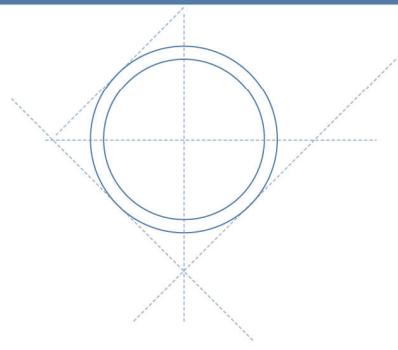

Remote electronic indicator with LCD is available for local flow indication and if required check/change of flow rate (differential pressure).

Principle of measurement

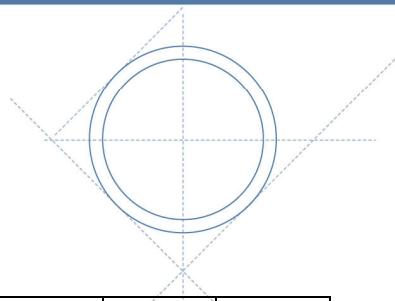

The FLEMCO is a velocity flow meter. A restriction in a pipe line changes the value of the different energies. Based on the law of energy balance developed by Bernoulli the sum of energies remains constant. Increases the velocity in the pipe line, decreases the pressure in the restriction. The pressure differential between the inlet pressure and the pressure in the restriction is measured expressing the flow velocity. When the physical values of the fluid are known and the inner pipe diameter is established the electronics calculate the flow rate. The flow rate is expressed in an analogue signal 4 - 20 mA or signal for digital communication.

Model F2

Technical data

Sizes	: DN 40 - DN 400, 1½" - 16", larger sizes on request
Pressure rating	: up to PN 40, 300 lbs, higher pressure ratings on request
Temperature	: Process : -50 - +150°C, higher temperature with Remote Mounting Kit
Mounting style	: Between flanges according to DIN or ANSI standards
Flange facing	: flat face (standard), raised face, DIN 2512 N, DIN 2513 R
Overall length	: 32 mm
Material	: Stainless steel AISI 316, others on request
Design and calculation standards	: ISO 5167, ASME MFC-3M.
Vent or drain hole	: On request
β (d/D)	: 0,5 and 0,6; other β on request.
Accuracy	: +/- 1 %
Rangeability	: 8 : 1
Repeatability	: better than 0,1 %
Pressure loss	: typical 150 mbar for liquid flow, and 50 mbar for gas flow (values are given at full flow)
Reynolds No	: Re > 5000
Allowable differential pressure	: max 2,5 bar
Output signal	: analogue 4 - 20 mA or Digital communication via protocol, HART, PROFIBUS, Fieldbus Foundation or others.
Local indicator (option):	LCD showing flowing units or %
Power supply	: 14 - 36 Vdc, typical 24 Vdc.
Max load (24 Vdc)	: 700 Ohm
Enclosure	: IP 67
Ex protection	: intrinsically safe EEx ia IIC T6, Explosion proof EEx d IIC T6
Temperature	: Ambient : -40 - +80°C

Overall dimensions

Installation requirements

The FLEMCO flow meter can be mounted in a horizontal or vertical pipe.

For liquid flow in a horizontal pipe the electronics shall be mounted below the pipe.

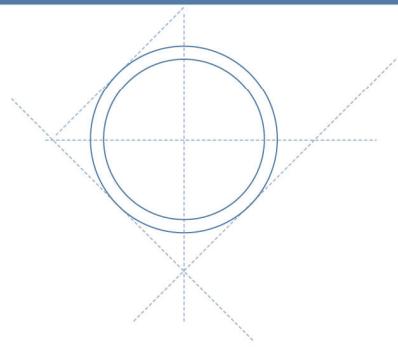

For gas flow in a horizontal pipe the electronics shall be mounted above the pipe.

To insure high accuracy of measurement, long straight pipe runs upstream from the flow meter is necessary. The required straight pipe run depends on the disturbance upstream. To maintain the 1% accuracy the minimum straight pipe run upstream shall be 14 x inner pipe diameter and 6 x downstream

If an additional inaccuracy of $\frac{1}{2}$ % is acceptable the required straight pipe runs are reduced to half of the above values.

If mass flow required due to changing process conditions ask for the ORIMAS mass flow meter data sheet.

Saturated and superheated steam is covered by STEEMCO flow meters
