MEASURE / SAMPLING FREQUENCY

The ML 252 converter can measure in two different modes:

CONTINUOUS SAMPLING

In this mode the converter measures according to the classic mag meter scheme; the system consumption, for any sensor diameter, is 0,1 W; the battery life is 1 month with 1 battery ; 1 month * N (N = number of additional battery). The system accuracy is defined according to this operation mode.

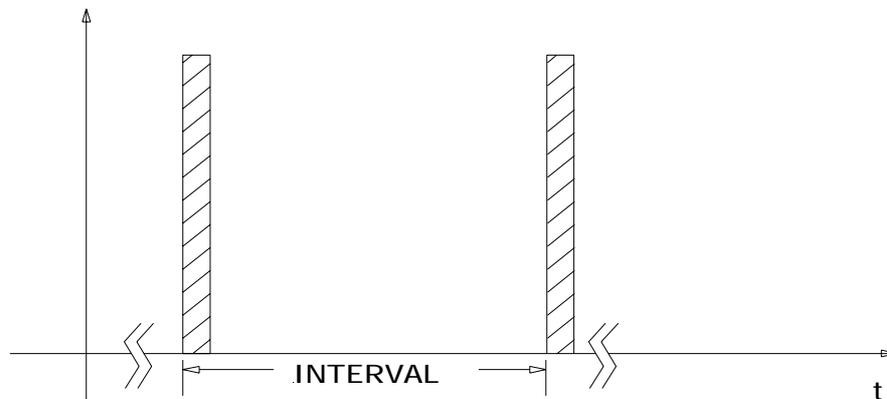

SAMPLING AT PROGRAMMED INTERVAL

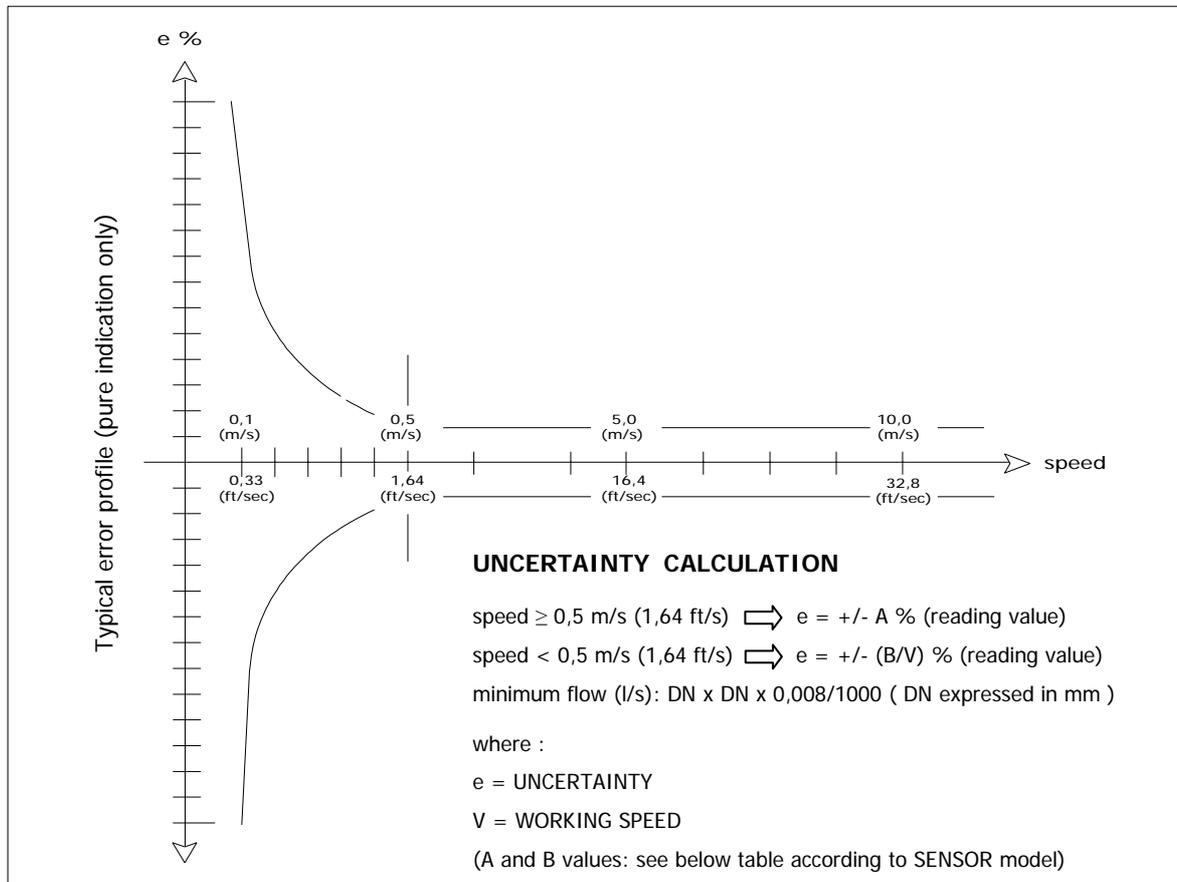

The mode to sample at intervals allows for large battery power savings; the consumption is the following:

Sampling time (s)	Battery life - n° 1 battery (years)	Battery life - " N " batteries (years)
1	0,7	0,7 * N
2	1.3	1.3 * N
5	2.1	2.1 * N
10	2.7	2.7 * N
15	3.0	3.0 * N

Regardless of the number of batteries, the maximum operating time is limited to 10 years
